No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                  US-09-972-970-4

Searched:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

tetraspan TSPAN-6 - mouse

(Species: Mar musculus (house mouse)

C) Accession: A59260

E) Accession: A59260

E) Accession: A59260

E) Accession: A59260

E) Accession: A59260

E) Accession: A59260

E) Accession: A59260

E) Accession: A59260

E) Accession: A59260

E) Accession: Accession of six new members of the tetraspanin/TM4SF family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             F/81-102/Domain: transmembrane #status predicted <TM3>

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present sequence is one such protein. The present protein can be used to screen for binding partners and molecules which modify its activity. Antibodies specific for the present protein can be used to treat and/or prevent diseases associated with abberant expression or activity of the present protein e.g. endocrine disorders e.g. Addison's disease, (cardio) vascular diseases e.g. arrhythmia and atherosclerosis, cerebrovascular diseases incural disorders e.g. Alzheimer's and Parkinson's disease, reproductive disorders e.g. psoriasis, renal system disorders e.g. neural nephritis, (auto) immune system disorders e.g. graft vs. host disease, hyperproliferative disorders e.g. neoplasms of the pancreas, ocular disorders e.g. graft vs. host disease, hyperproliferative disorders e.g. neoplasms of the pancreas, viruses and disorders e.g. graft vs. viruses and

Sequence of the invention receptor polypeptides and polynuclecides. Sequence of the invention are useful for preventing, treating, ameliorating or diagnosing a pathological condition. TMASP polypeptides are useful for screening molecules which modify their activity. TMASP nucleic acids, protein, antibodies, agonists and antagonists are useful in the diagnosis, treatment and prevention of cancer, particularly breast and ovarian cancer, and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; immune disorders such as Addison's disease, allower, autoimmune hammolytic anaemia, autoimmune thyroiditis, allowers, and ulcerative colitis; cardiovascular disorders such as myocardial ischaemias; wound healing; neurological diseases such as myocardial ischaemias; wound healing; neurological diseases such as myocardial ischaemias; wound healing; neurological diseases such as myocardial ingene parasitic infections diseases such as viral, bacterial, fungal and parasitic infections. TMASP polynucleotides are also useful in gene therapy. The present sequence is human TMASP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9

```
This sequence shows tetraspanin 23228. This protein is a cell surface protein having four transmembrane domains (TM1-TM4). TM1, TM3 and TM4 that a single polar amino acid located within them, which may interact with each other and contribute to domain stability. The cytoplasmic New the ach other and contribute to domain stability. The cytoplasmic New the last ham 30 amino acids in length. The second extracellular domain action are less than 30 amino acids in length. The second extracellular domain action obstween TM3 and TM4 contains conserved Cys residues and may function to bind extracellular growth factors, such as HB-EGF, TGF-alpha and amphiregulin. The 23228 protein is useful for diagnosing and treating concephalomyelitis, dermatitis, crohn's disease and asthma; cell such as diabetes mellitus, arthritis, multiple sclerosis, encephalomyelitis, dermatitis, Crohn's disease and asthma; cell metastasis, and/or viral infections. 23228 polypeptide can control cellular signalling activity, bind to an extracellular growth factor, for example, amphiregulin, regulate cell proliferation, bind to a cell correct control activity, bind to another tetraspanin such as GD81, to associate with a metility, bind to another tetraspanin such as GD81, to association with a cell antigen receptor and the ability to modulate the association
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          LDPVWLFVVVGGVMSVLGFAGCIGALRENTFLLKFFSVFLGLIFFLELATGILAFVFKDW 120

The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are established from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune through architis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and parasitic infectious diseases such as viral, bacterial, fungal
                                        Cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; anticonvulsant; antidecterial; antifungal; antiparasitic; cardiant; gene therapy; cancer; immune disorder; cardiovascular disorder; neurological disease; infection; human; secreted protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 LDPVWLFVVVGGVMSVLGFAGCIGALRENTFLLKFFSVFLGLIFFLELATGILAFVFKDW 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 MPGKHQHFQEPEVGCCGKYFLFGFNIVFWVLGALFLAIGLWAWGEKGVLSNIXALTDLGG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a human transmembrane proteins (HTMP). Agonists and antsgonists of the protein are used to treat a disease or condition associated with overexpression of the protein. Diseases and conditions which can be treated include cell proliferative, immunological, reproductive, smooth muscle and neurological disorders e.g. arteriosclerosis, myeloma, leukaemia, acquired immunodeficiency syndrome (AIDS), allergies, ovulatory defects, angina, hypertension, stroke, Alzheimer's disease, epilepsy and Tourette's disorder. The polynucleotides may be used to detect and quantify gene expression in biopsied tissues where protein expression may be correlated with disease e.g. to determine absence, presence or excess expression of HTMP or to monitor regulation of HTMP expression during therapeutic intervention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120

nucleotide sequence selected from any of 948 sequences
(ABZ1119-ABZ12066) or their mature protein coding portion, active domain
coding protein or complementary sequences. The polymucleotides are useful
coding protein or complementary sequences. The polymucleotides are useful
for identifying expressed genes or for physical mapping of human genome.
The encoded polypeptides (ABP68902-ABP69849) are useful as molecular
confidentifying expressed genes or for physical mapping of human genome.
The encoded polypeptides (ABP68902-ABP69849) are useful as molecular
confidentifying expressed genes or generating antibodies, in
medical imaging, screening and diagnostic assays and for treating
cell-proliferative disorders (cancer), neurodegenerative diseases
(Parkinson's or Alzheimer's disease), autoimmune diseases (multiple
sclerosis, diabetes, lupus) genetic disorders, myeloid or lymphoid
cdisorders, platelet or coagulation disorders, wound, burns, incision,
ulcers, liver or lung fibrosis, infections (bacterial, viral, fungal,
comparasitio), arrhritis, etc.
Concert The sequence data for this patent did not form part of the printed
specification, but was obtained in electronic format directly from NIPO
cat fip.wipo.int/pub/published_pot_sequences.

AAC97991 to AAC98763 encode the human colon cancer associated proteins, called human colon cancer antigens, given in AAB51234 to AAB54006. The human colon cancer antigens can have cytostatic, cardioactive, muscular; neuroprotective, immunomodulatory, gynaecological, gastrointestinal, vulnerary, nephrotropic, antiinfective and antibacterial activities, and can be used in gene therapy. The colon cancer antigen polymucleotides, proteins and antibodies to the proteins are useful for the prevention, treatment and diagnosis of colon disorders, such as colon cancer. The polymucleotides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins may also be used to prevent diseases such as neural disorders, immune system disorders, muscular disorders, reproductive disorders, immune gastrointestinal disorders, wounds, renal disorders, infectious diseases, and cardiovascular disorders. AAC98764 to AAC98772 and AAC98707 represent sequences used in the exemplification of the present
                                                                      177
